CERT+

The AppViewX CERT+ product enables the Certificate Lifecycle Automation solution on our AppViewX Platform. CERT+ helps enterprise IT manage and automate the entire lifecycle of their internal and external PKI. CERT+ provides extensive visibility into the certificate and encryption key infrastructure which helps protect the enterprise from threats to the business. Application, network, and security engineers may self-service and initiate automation workflows that deliver compliance and true business agility.
CAPABILITIES

Certificate and Key Management

- Discover, create, renew, provision, and revoke certificates and keys in your multi-cloud environments.
- Automate your certificates and key lifecycles on application servers, firewalls, ADCs, and endpoint devices.
- Leverage internal and external certificate authorities in your chain of trust.

Automated Workflows

- Automate your network infrastructure business processes.
- Design workflows using our library of tasks supporting our multi-vendor ecosystem of technology partners.
- If needed, create and maintain your own tasks.
- Expose the workflows to roles who are allowed to launch automation.

Self-Service

- Give your teams the ability to launch automated workflows.
- Simplify self-service with user-friendly forms.
- Expose your automated workflows to programmers who can self-serve via REST APIs.

Granular RBAC

- Define your own roles.
- Leverage AD, LDAP, and RADIUS identity systems.
- Control how roles are allowed to use our automation solutions as well as build and execute automation workflows.
- Use our integration with leading privilege access management solutions to secure device credentials.

Context Aware

- See the configuration, state, and performance of your infrastructure.
- See the changes in the network infrastructure supporting the application.
- Trigger automated workflows based on changes in the network infrastructure.
- Initiate automated workflows from context-rich and actionable dashboards.

Multi-Vendor
- Leverage the automation tasks and workflows that we maintain and support for our ecosystem of technology partners.
- Support different versions of their solutions.
- Give your teams a multi-vendor and application centric view of the infrastructure and services supporting the application.

Multi-Cloud

- Execute your automated workflows in public cloud, private cloud, software-defined, and hardware environments.
- Automate cloud and software-defined infrastructure in the same way as your legacy hardware infrastructure.

Scalable, Distributed, and Modular

- Support thousands of users using our platform.
- Build automation workflows for ALL of your devices.
- Cluster the AppViewX Platform for additional performance and scale.
- Add new support for technology partners without bringing down the platform.

About AppViewX

AppViewX is revolutionizing the way NetOps and SecOps teams deliver services to Enterprise IT. The AppViewX Platform is a modular, low-code software application that enables the automation and orchestration of network infrastructure using an intuitive, context-aware, visual workflow. It quickly and easily translates business requirements into automation workflows that improve agility, enforce compliance, eliminate errors, and reduce cost. AppViewX is headquartered in Seattle with offices in the U.S., U.K., and India. To know more, visit **www.appviewx.com**.
