

Modern Authentication & Identity for Law Enforcement

Enhance the security & productivity of your law enforcement organization with flexible, MFA modalities & optimized workflows to meet CJIS requirements

Law enforcement organizations are navigating an ever evolving landscape of security and compliance. The frequency of ransomware attacks on law enforcement organizations doubled year-over-year in 2023. **CJIS Compliance** is a proactive defense against the most common attack points for those and other cyber-attacks to an organization's systems and processes. While compliance is non-negotiable, it needs to be instituted in a way that facilitates convenient access to information for law enforcement professionals and efficient completion of tasks in the field and on premises. At the organizational level, achieving CJIS compliance needs to be streamlined, flexible and cost-effective.

auth^x Delivers

Cloud Platform - Enable Remote Users With Ease
AuthX is built for the cloud and modern cloud applications. Our solution allows you to easily enable remote users with advanced authentication workflows like badge tap, remote unlock, facial recognition, biometrics and more.

Integration with your Identity Stack
Built on open standards and integration best practices. AuthX can enhance authentication with existing identity tools in your organization today, or deliver an end-to-end identity provider for health systems and practices without existing tools.

Expanded Authentication Workflows
AuthX delivers modern passwordless authentication, but with desktop and mobile workflows that enhance productivity, like shared kiosk, delegation mode, remote unlock and more.

Go Beyond Passwords

Knowledge based authentication (KBA) are one the biggest vulnerabilities in any organization, but it don't have to be! AuthX delivers seamless passwordless authentication workflows.

Lower Your Identity Costs

AuthX has affordable monthly user licensing, and supports lower cost readers. Many customers are able to replace overlapping identity solutions like MFA, EPCS, SSO/AM and more.

Partners in Success

We work alongside your team to ensure successful migration and user acceptance. Our constant innovation is driven by customer feedback.

AuthX Benefits

Multi-factor Authentication

To enable secure access to workstations and online applications, provide the user with two or more authentication factors.

Benefits

Cybersecurity, easy-to-use Interface, passwordless log-in, & more.

Single Sign-On

One login to multiple applications. With SAML, OpenID, & OAuth connectors enjoy frictionless access to multiple web applications.

Benefits

Minimal password to remember; Easy to deploy; Easy Sign-in.

Identity Access Management (IAM)

Enterprises that employ AuthX IAM are capable of handling user identity and achieving device access management seamlessly.

Benefits

Increase productivity, save time, & upgrades security.

Workstation Security

Enforce Zero Trust policy and increase security to workstations using various authentication factors, such as biometric, mobile, & more.

Benefits

Reduce phishing attacks, avoid unwanted access, & streamline access
